

WHAT A WONDERFUL WORLD

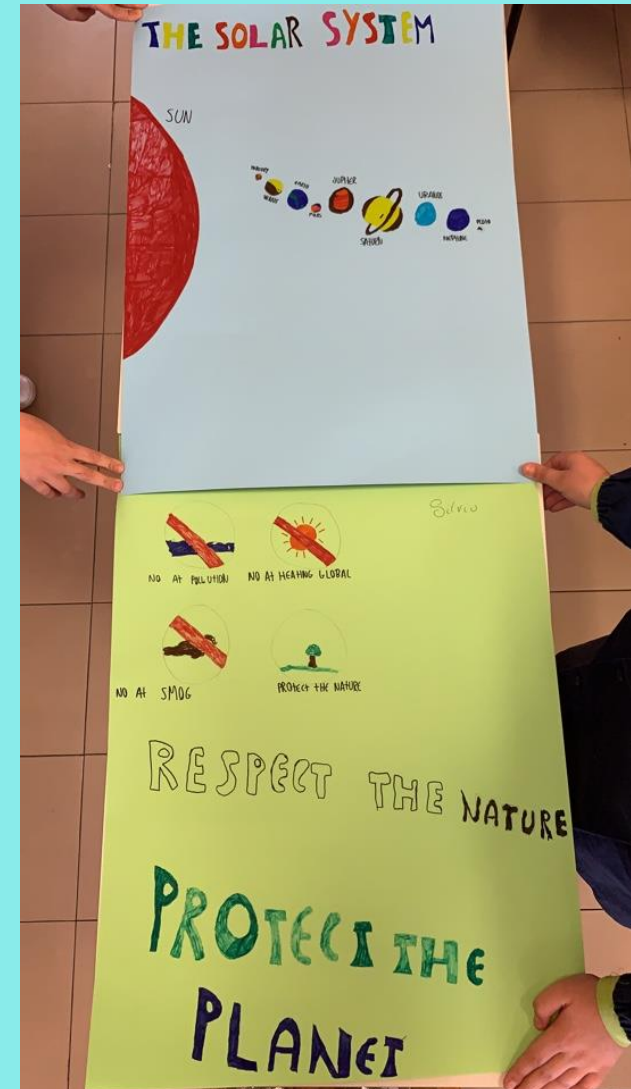

HAPPY EARTH DAY

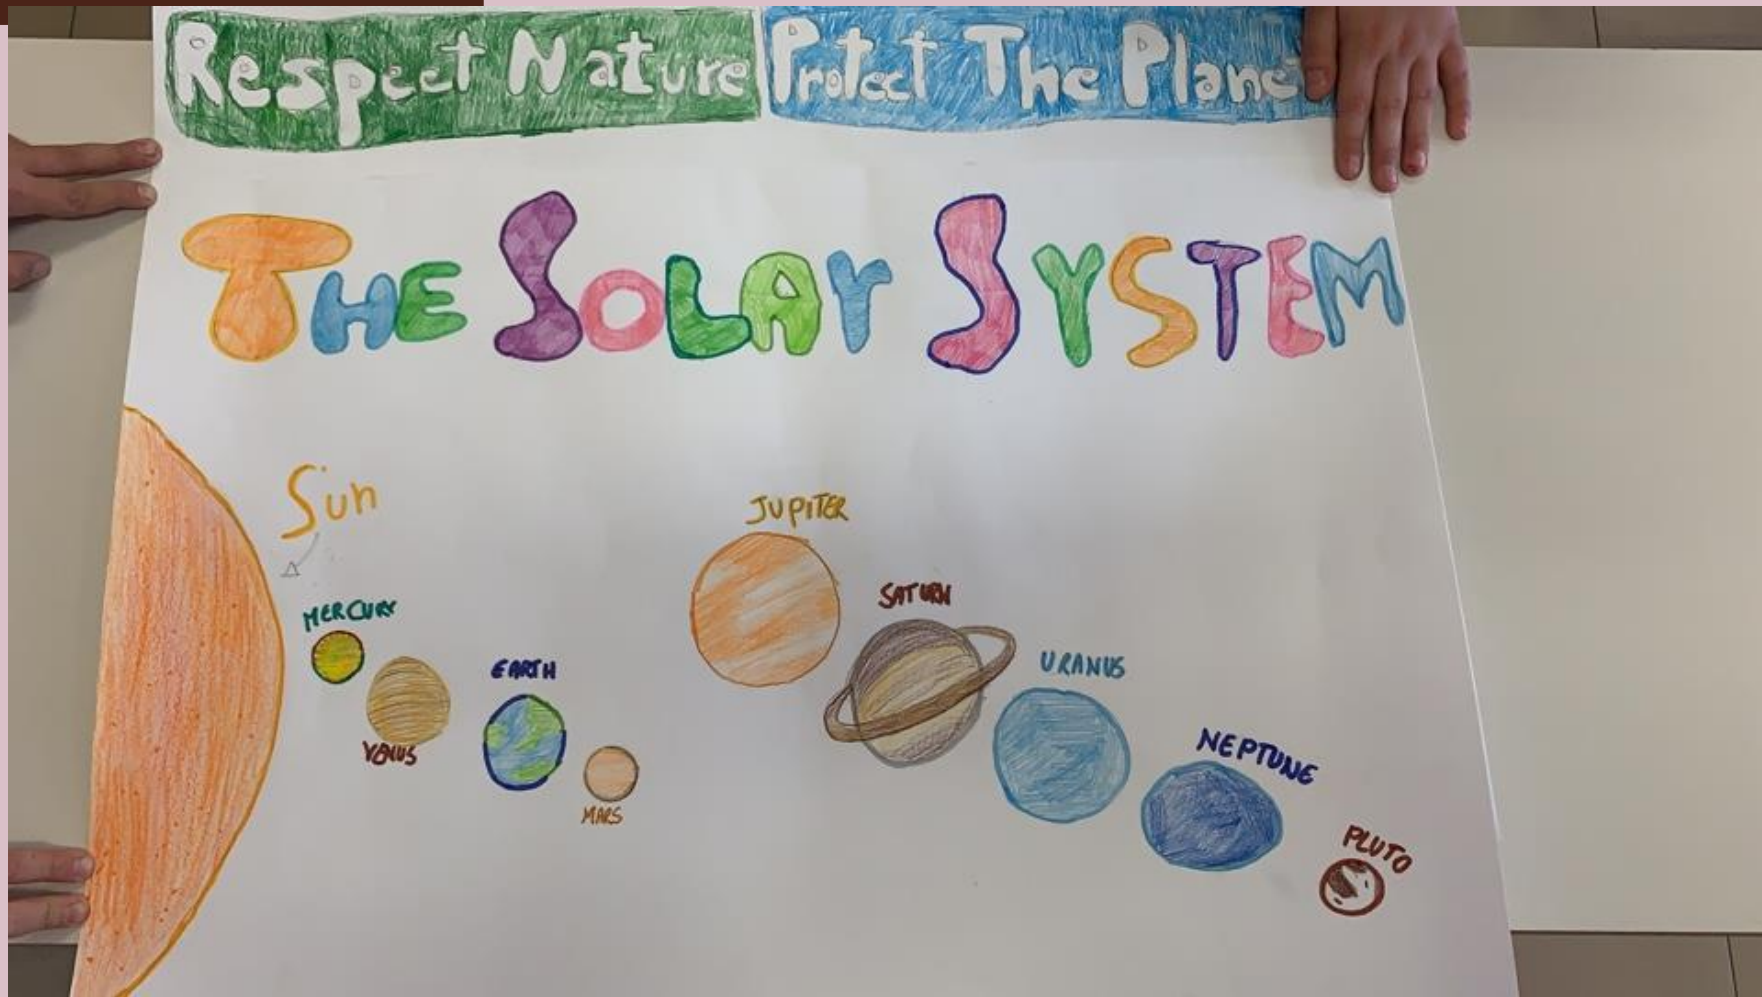

EARTH, YOU ARE BEAUTIFUL!

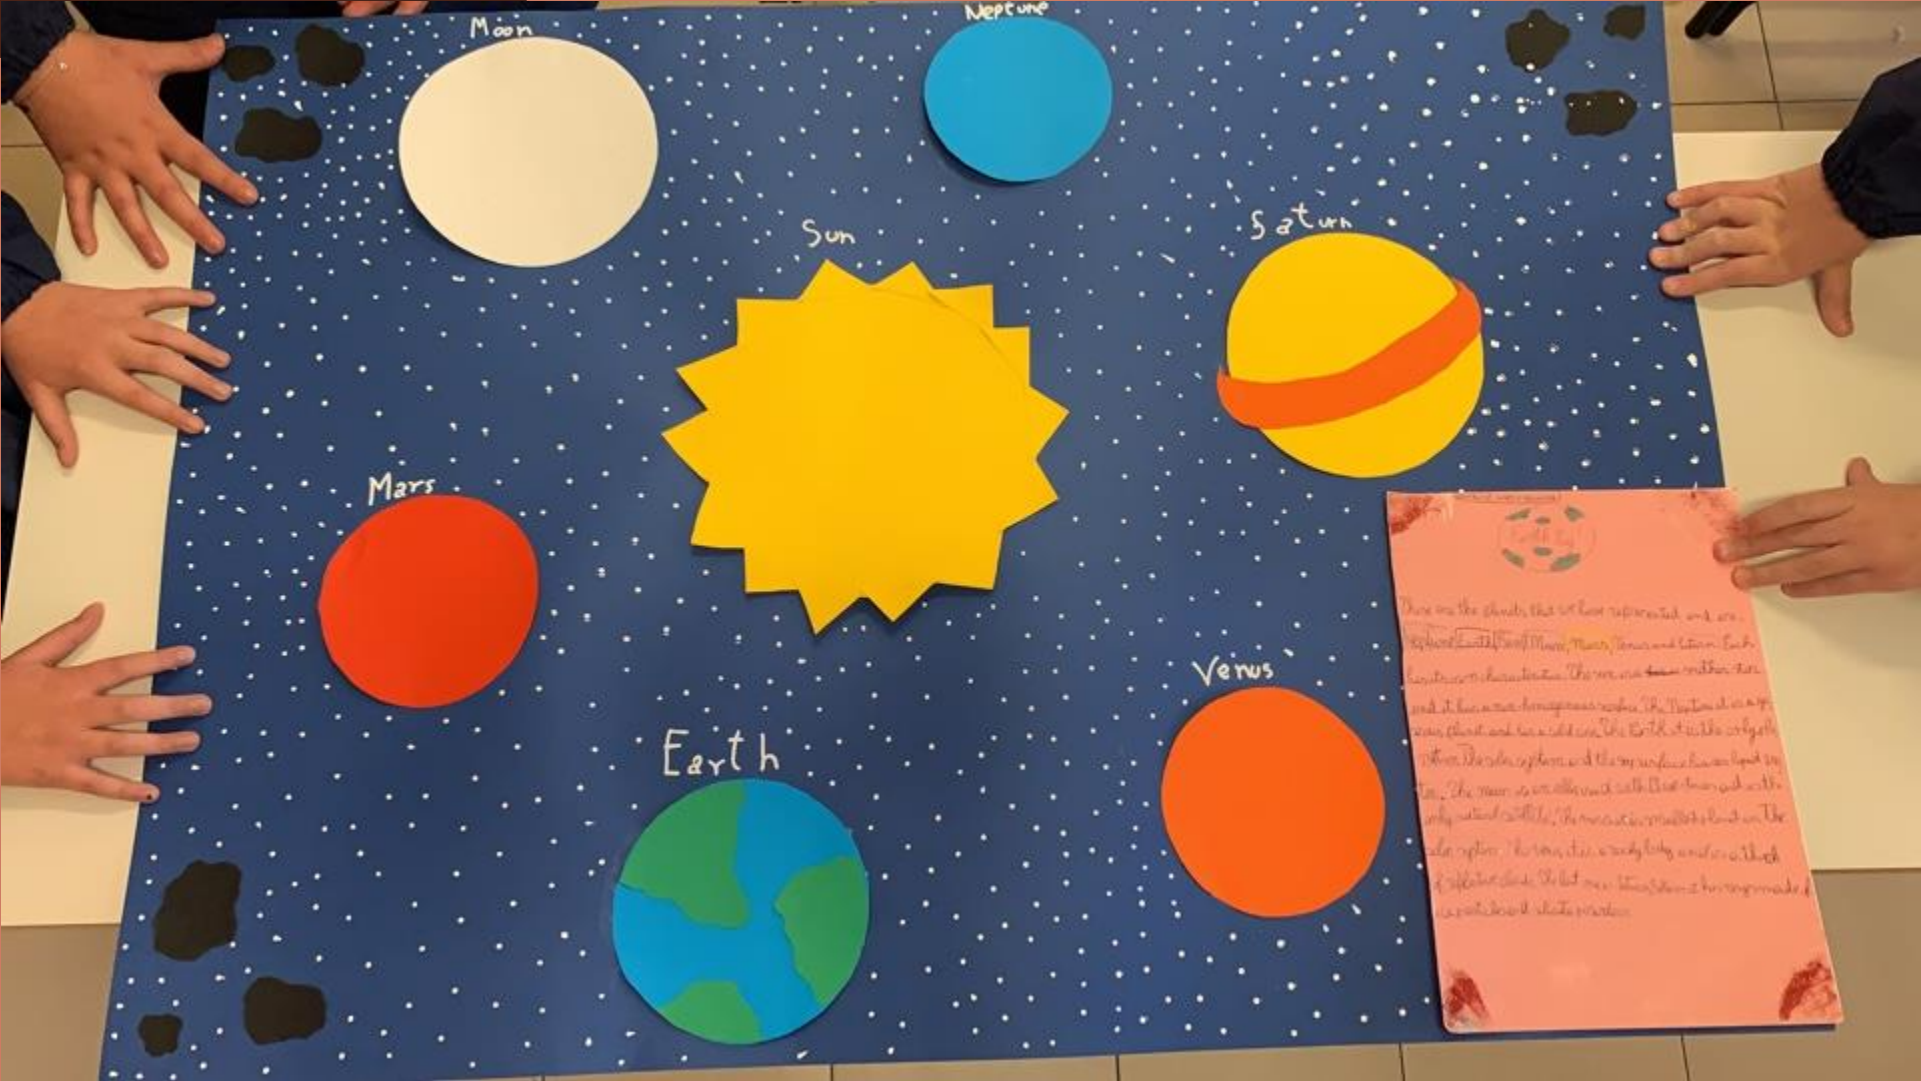

THE EARTH IS EVERYTHING!

RESPECT THE NATURE!

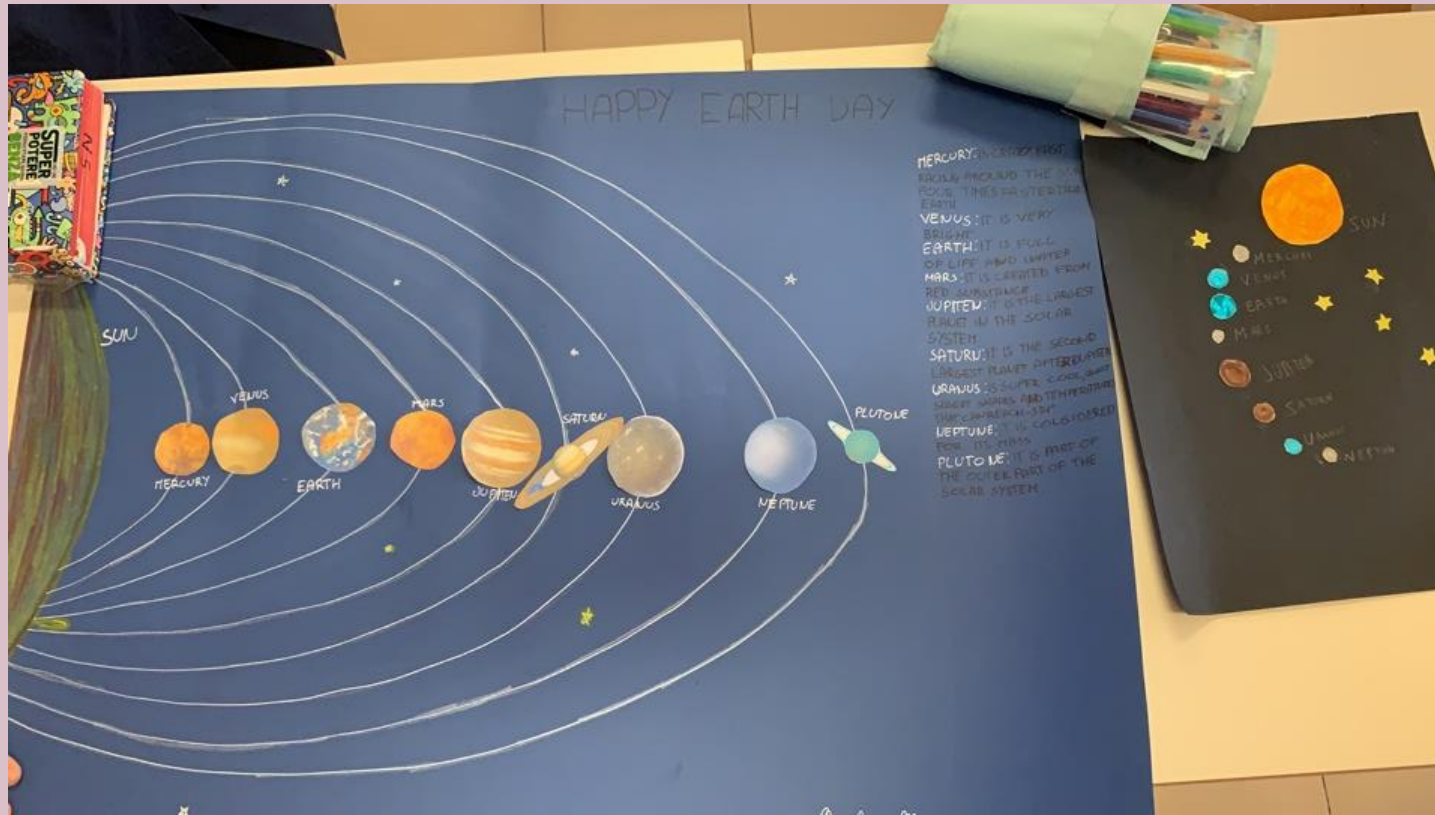

THE SOLAR SYSTEM

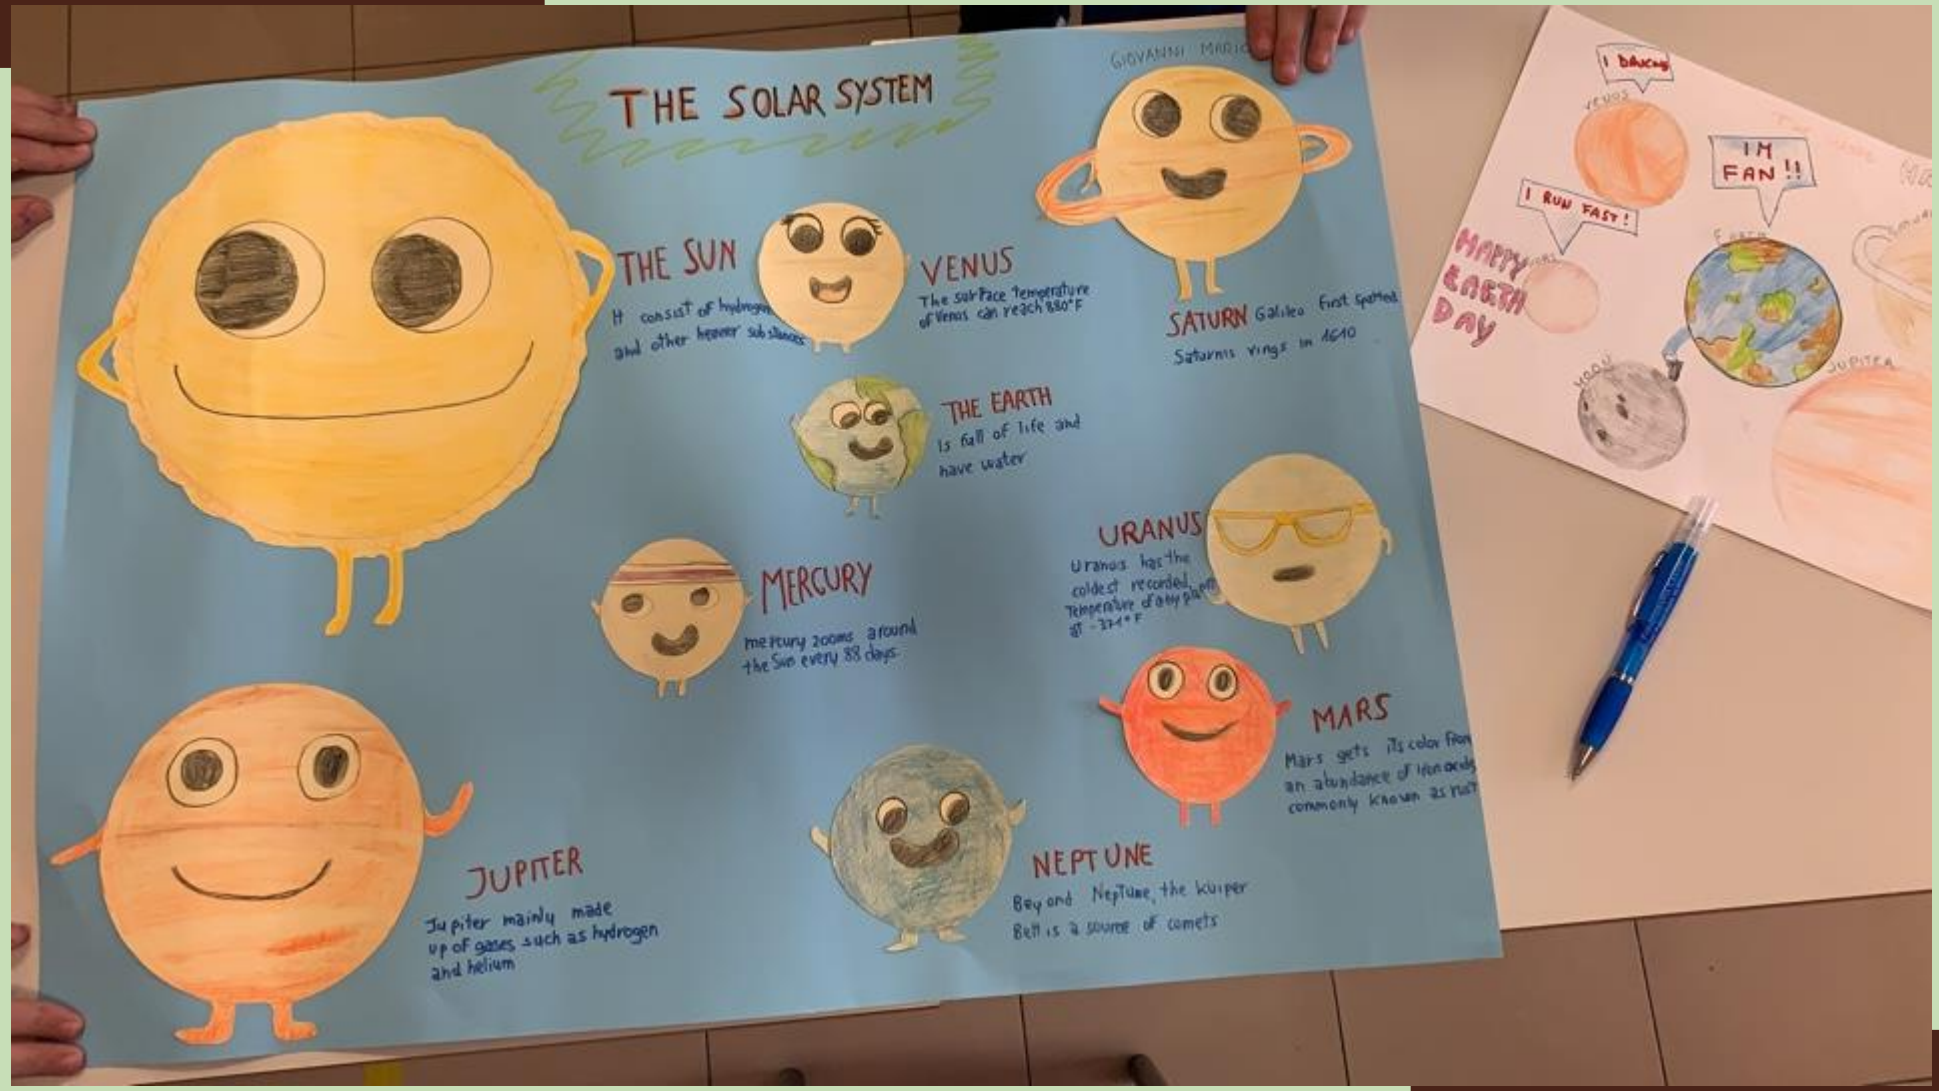

These are the planets that we have represented and are
represented by the Sun, Mars, Venus and Saturn. Each
planet has its own characteristics. The one we have chosen is
and it has a very homogeneous surface. The first one is a
very hot and has a solid core. The Earth is the only one
with water, oxygen and life. Its surface has a liquid
ocean. The moon is an orbiting satellite and with
only water on the surface. The moon is a satellite of the
Earth. The sun is a very hot and is a ball
of glowing gases. The hot sun is made of
a hot liquid white matter.

EARTH YEH!

EARTH, YOU ARE FULL OF LIFE!

I'M THE HAPPIEST PLANET!

WHAT CAN WE DO TO SAVE THE PLANET?

IF WE WANT TO SAVE OUR PLANET WE MUST CONTRIBUTE TO SAVE PLANTS, ANIMALS AND TO REDUCE THE PLASTIC THAT POLLUTES WE HAVE TO MAKE THE WORLD A BETTER PLACE, BECAUSE THERE IS NO A PLANET B AND WE HAVE TO MAKE IT A PLACE FOR FUTURE PEOPLE WHERE THEY CAN LIVE IN PEACE.

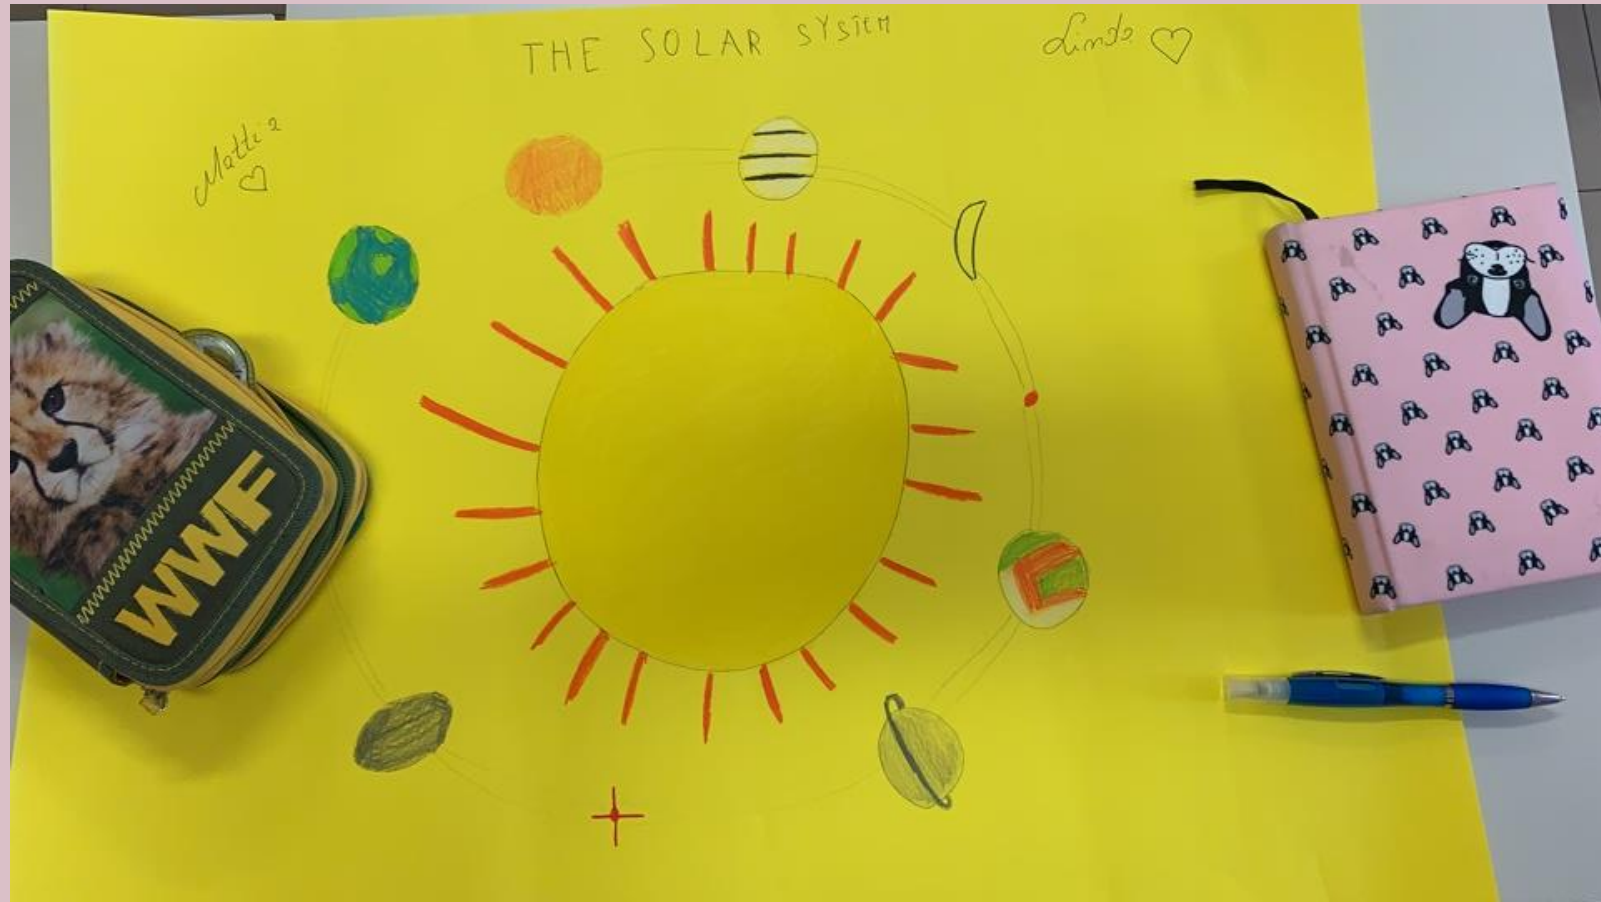

① The water is very, very important, so we have to reduce the pollution

② plants and animals are essential to make fruit and the food that we eat every day so we have to protect them.

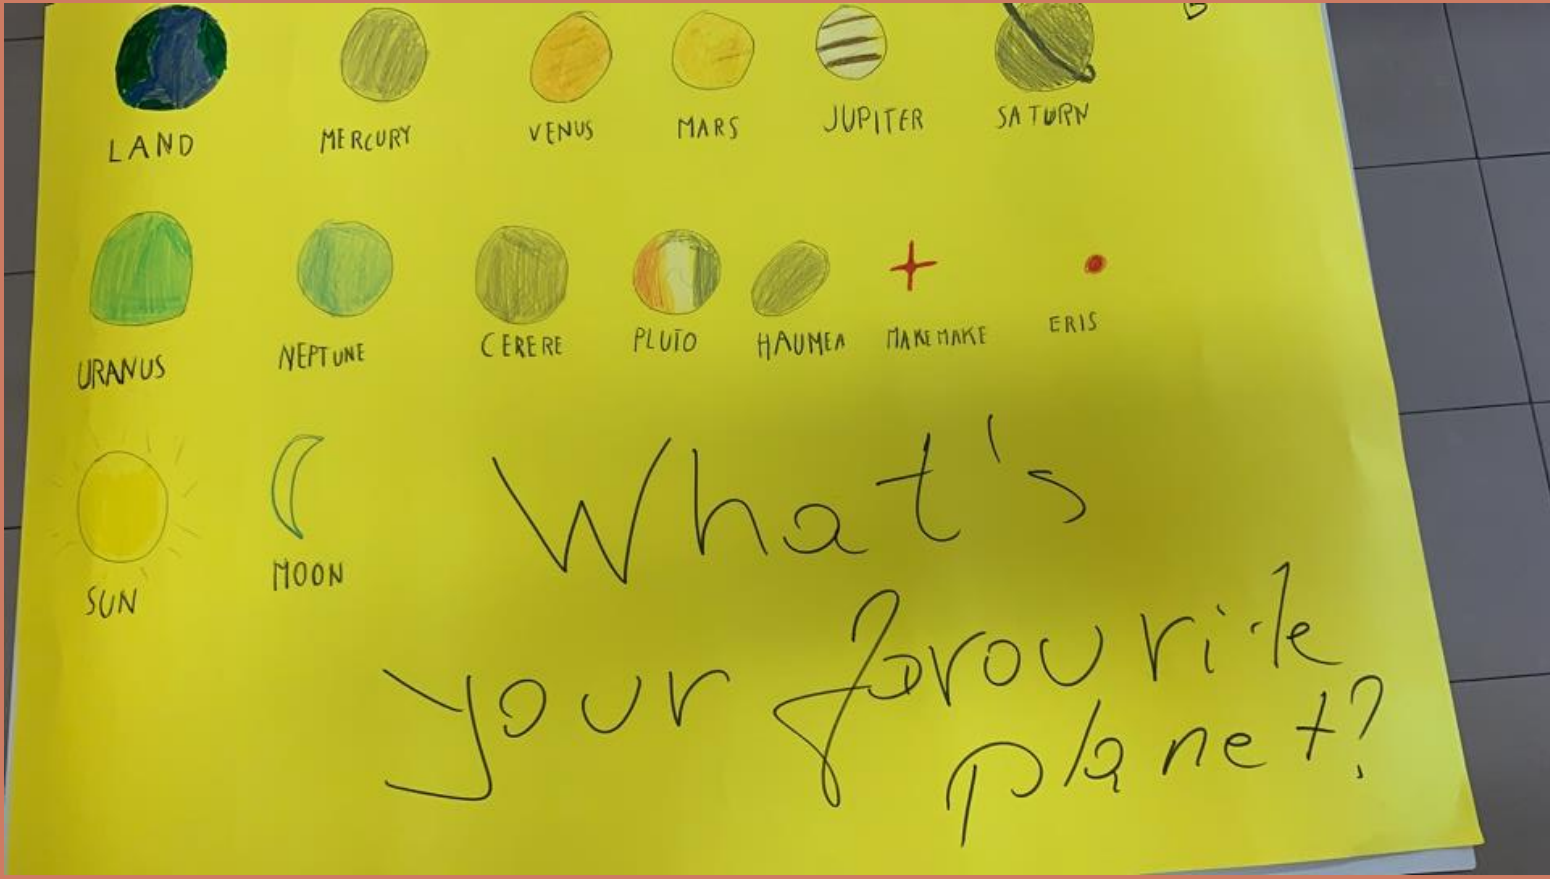

③ We are destroying our world, so we have to repair it and to reserve every plant, animal and the things of the nature
